Okay, lets shoot for September 5th week if you can find another driller.

Nic,

I reached out to the utility locate guy yesterday and this morning, but haven't heard anything back yet. I checked the extended forecast for Hope this morning, and the forecast has changed a bit since yesterday. Thunderstorms aren't predicted for Monday/Tuesday (for now), but we'll still need to wait for the ground to dry up and have the site mowed for the ground penetrating radar to operate properly. With all the rain the area has received, we may need to let the site dry up next week.

The driller sent us his current schedule, and he isn't available until the week of September 19th, so I'll have to find another one if we want to start sooner.

I'm thinking we may need to push this to September 6th or September 19th. What are your thoughts?

Yep, I just looked it up. We will have to leave it up to the locate company. Can you call them and see what they think or what the timeline would be before they can do locates?

It's been raining in Hope since we left. There's 40% chance of scattered thunderstorms there today, with decreasing rain through Wednesday. Extended forecast has thunderstorms predicted starting again Thursday/Friday, running through Tuesday, August 30th.

Nic,

Are we still looking at August 29th to go back to Hope? I'll need to get someone out there to mow the grass. The site was pretty overgrown when I was there on the 15th.
